

Acrylic Care Instructions

1. Cleaning

Use a soft, lint-free microfiber cloth to clean the acrylic.

Avoid abrasive materials such as scouring pads, rough towels, or brushes, as they can scratch the surface.

Do not use harsh chemicals, including ammonia, bleach, or solvent-based cleaners, as they can cause clouding, cracking, or discoloration.

2. Handling & Protection

Keep sharp objects away from acrylic surfaces to prevent scratches.

Avoid placing extremely hot items directly on the acrylic, as high temperatures can warp or melt it.
